Make sure you dont close the Feeder app (just minimize it, itll go to the tray) Does Nimbus require higher bluetooth version than 2.. Any Suggestions I turn it on press the BT-Button for a few seconds to let it be in pair-mode but it wont show up on my PC.. Do you have other devices on the list available in the feeder For me it hasnt any appropriate name, and its Vendor ID was 65535.. Win10 Nimbus connects to bluetooth, shows up in my bluetooth settings, I choose vendor 65535, with Nimbus config file and vjoy id as 1, click Refresh and it say I am ready to use the gamepad, but nothing works when I go to a game of the vjoy monitor.

Windows 10 should be able to see Bluetooth devices advertising to it just fine I mention this on the off-chance that it is a problem, as I dont want to you to waste time debugging a problem that isnt being caused by your software at all. With the most popular games for every genre, you'll have full control of your favorite games.. Do you have any reason to think it might work on the new version given otherwise-identical conditions.. I even forgot device in Apple TV and tried again with no luck I can see it if I plug it in via cable, but not with Bluetooth.. Currently I'm able to run MFI Gamepad Feeder only natively on Windows PC I guess that it should fix all the problems listed in this issue.. When you're connecting via cable, the driver doesn't send any commands after button presses.. 0 perhaps because I think my Bluetooth device says it's only 2.0 SteelSeries Nimbus PC Drivers Are Required Have you guys installed Microsoft Xbox software Could Axadiw confirm if the Xbox drivers are required (I assume they are). 0041d406d9 [Hp Laptop Manuals Free Downloads](#)
